

# Measurement and Evaluation Plan

*How Apps for Change will measure reach, use, and outcomes, 2027 to 2029*

Prepared by Sam, Executive Director

October 28, 2026 · Updated October 29, 2026

## At a glance

AFC will measure each app's reach, use, and one core outcome, review the numbers every quarter, and report only totals that can't identify anyone.

- **What we measure:** reach and use in every app, one core outcome per program, community participation, accessibility, and which counties panel members live in.
- **How:** totals counted automatically from app data and Apple's and Google's reports, plus short email surveys for adults who join the AFC Impact Panel. Nothing inside the apps asks survey questions, and nobody reads anyone's entries.
- **How often:** numbers pulled monthly, reviewed with the Board each quarter, and shared in an annual impact report starting in 2028.
- **Targets:** set for each app's first 12 months after launch, adding up to 5,000 downloads and 500 monthly active users. The 2027 milestone is 1,000 downloads across live apps (stretch: 2,500).
- **Who sees results:** the Board, the community at town halls, funders, and the public, always as totals, with groups under 10 never shown.
- **Cost:** no new tools, and the panel runs on free benefits only. About 4 hours a month from the Executive Director and a one-time build of about 12 to 16 hours by the Lead Developer (estimates).

## Purpose and principles

We measure to learn what helps, fix what doesn't, and give funders honest numbers, without weakening the privacy promise that makes the apps trustworthy.

### Why we measure

- **Improve the apps:** find what works and what confuses people, then fix it before and after each launch.
- **Answer to our community and Board:** show what people's input changed, as Section 6.8 of the bylaws asks.
- **Report to funders:** give each program consistent, credible numbers.

### Rules we measure by

1. **Totals only.** Numbers come from automated counts and app store reports. Nobody reads entries to make them (Privacy Policy, Section 4), and panel answers are reported only as totals.
2. **Always optional.** The panel is opt-in and for adults only, with its own consent, and joining or leaving never changes how any app works.
3. **Groups under 10 stay hidden.** Any survey result from fewer than 10 people shows as "fewer than 10," in internal and public reports alike.
4. **Only what we use.** Every question feeds a measure in this plan, or we don't ask it. Each panel survey has one optional comment box, read only by Sam.
5. **No tracking tools.** No third-party analytics or advertising SDKs in any app, Beat the Craving above all.
6. **No surveys inside the apps.** The apps never ask survey questions; surveys go by email, only to people who join the panel. The one rating inside an app, "How did it go?" in Advocate's Compass meeting notes, is part of the tool, and nothing prompts for it.
7. **Honest claims.** We call results self-reported, say "contributed to" rather than "caused," report what fell short, and make no health claims.
8. **Shared back.** Results return to the community at town halls and in the annual impact report.

## Evaluation questions

Six questions drive the plan: four about how the program runs and two about whether people benefit.

| # | Question | Main evidence |
|---|---|---|
| 1 | **Reach:** Are we reaching the people each app was built for, starting in Minnesota? | Downloads, monthly active users, panel members by county, downloads by partner link |
| 2 | **Use:** Do people use the core features and keep coming back? | Feature counts, 90-day retention |
| 3 | **Community power:** Do users shape what we build? | Town hall attendance, private testers, ideas answered, changes from feedback |
| 4 | **Access:** Can people with disabilities use every app fully? | Accessibility reviews, issues fixed, ease-of-use answers, accommodations met |
| 5 | **Early benefit:** Within 3 months, do users report the change each program aims for? | Core outcomes from app data, plus panel surveys at 3 months |
| 6 | **Lasting benefit:** Does the change hold at 12 months, and does well-being improve? | Panel surveys at 12 months, including the AFC Well-Being Check |

Each quarterly review also asks one learning question: what should we change next, and why?

## Measures for every app

Every app reports the same nine measures, so results can be tracked over time and added up for the whole organization.

| Measure | Definition | Source | When | Target |
|---|---|---|---|---|
| Downloads | First-time downloads, iPhone plus Android | App Store Connect, Google Play Console | Monthly | Per program (next section) |
| Monthly active users | Accounts that opened the app at least once in the calendar month | Monthly totals job | Monthly | Per program, reached by month 12 after launch |
| 90-day retention | Share of new accounts that open the app in days 61 to 90 after sign-up | Monthly totals job | Monthly, reviewed quarterly | 30% for Care About You and Beat the Craving; others set after two quarters |
| Helpfulness | Share of panel members rating the app 4 or 5 out of 5 | Panel survey | 3 and 12 months | Set after two quarters |
| Ease of use | Share of panel members who could do everything they wanted (Yes or Mostly) | Panel survey | 3 months | Set after two quarters |
| Perceived change | Share of panel members who say things got better since they started the app | Panel survey | 3 and 12 months | Set after two quarters |
| Well-being (AFC Well-Being Check) | Share of panel members whose score improves or holds steady from joining to 12 months | Panel survey | Joining, 3 and 12 months | 55% |
| County reach | Panel members by county, and the share in Minnesota, the East Metro, and the St. Croix Valley | Panel sign-up | Quarterly | Track |
| App quality | Average store rating and crash-free rate | App Store Connect, Google Play Console | Monthly | Track |

The logic models propose that targets be reviewed after each app's first two quarters of live data, so new measures start as "track." The 55% well-being target comes from Goal Getter's logic model; the Board confirms it for the other apps when 12-month results arrive in 2028. "Learning and reporting" below defines "improves" and "holds steady."

## Program measures

Each program tracks its reach, the use that drives its outcome, and one core outcome, with targets for its first 12 months after launch.

### Advocate's Compass · public launch April 2027

Core outcome: people walk into meetings prepared and raise what matters most to them.

| Measure | How it's counted | When | First-year target |
|---|---|---|---|
| Downloads | App store totals | Monthly | 1,500 |

| Measure | How it's counted | When | First-year target |
|---|---|---|---|
| Monthly active users | Totals job | Monthly | 150 |
| **Felt prepared (core)** | Share of users who rate their latest meeting 4 or 5 for feeling prepared, in the meeting notes | Totals job, monthly | 75% |
| Raised top priority | Share of rated meetings where the user marked Yes | Totals job, monthly | 70% |
| Follow-through | Share of follow-up items marked done within 30 days | Totals job, monthly | 60% |
| Learning | Lessons completed per active user | Totals job, monthly | 2 or more |
| Self-advocacy skills | Share who improve on the Speaking Up Check | Panel: joining, 3 and 12 months | 60% |
| Scripts requested | Advocate Now requests, counted only, never read | Totals job, monthly | Track |
| Workshops | Self-advocacy workshops held with a partner | Workshop records | 4 |
| East Metro pilot | Share of pilot participants who live in Dakota, Ramsey, or Washington County | Workshop and panel sign-ups, each cohort | 50% or more |

Both meeting measures come from an optional "How did it go?" rating in each meeting's notes. Nothing prompts for it, including near the end of a meeting, and it's counted only as totals. The East Metro pilot runs through East Metro partners and workshops, with its timing and size set after the January 2027 calls with SPMF and F. R. Bigelow.

## Goal Getter · public launch mid-September 2027

Core outcome: goals turned into action and achieved.

| Measure | How it's counted | When | First-year target |
|---|---|---|---|
| Downloads | App store totals | Monthly | 1,000 |
| Monthly active users | Totals job | Monthly | 100 |
| Goals with steps | Share of active users with at least one goal broken into action steps | Totals job, monthly | 75% |
| **Milestone in 90 days (core)** | Share of users active in their first 90 days who complete at least one milestone in that time | Totals job, quarterly | 50% |
| Goal progress | Share who improve on the Goal Progress Check | Panel: joining, 3 and 12 months | 55% |
| Well-being | Share whose AFC Well-Being Check score improves or holds steady | Panel: joining, 3 and 12 months | 55% |
| Goal reached | Share who say they reached a goal that matters to them | Panel: 12 months | 50% |

## Care About You · public launch by November 13, 2027

Core outcome: more kindness, less loneliness.

| Measure | How it's counted | When | First-year target |
|---|---|---|---|
| Downloads | App store totals | Monthly | 1,000 |
| Monthly active users | Totals job | Monthly | 100 |
| Kindness in action | Share of scheduled acts marked complete | Totals job, monthly | 50% |
| Frequency | Completed acts per active user per month | Totals job, monthly | 4 |
| **Less loneliness (core)** | Share of panel members lonely when they join (Agree or Strongly agree that loneliness has been hard for them) whose answer moves at least one step toward Disagree | Panel: joining, 3 and 12 months | 50% |
| Well-being | Share whose AFC Well-Being Check score improves or holds steady | Panel: joining, 3 and 12 months | 55% |
| Connection and kindness | Share who improve on the Connection and Kindness Check | Panel: joining, 3 and 12 months | 55% |
| 90-day retention | Share of new accounts active in days 61 to 90 | Totals job, monthly | 30% |

## Beat the Craving · public launch early December 2027

Core outcome: more cravings managed without a return to use.

| Measure | How it's counted | When | First-year target |
|---|---|---|---|
| Downloads | App store totals | Monthly | 1,500 |
| Monthly active users | Totals job | Monthly | 150 |
| Coping plan in place | Share of new users who save a coping plan within 14 days | Totals job, monthly | 60% |
| **Cravings managed (core)** | Share of logged cravings marked as managed without use | Totals job, monthly | 70% |
| Confidence | Share of panel members who Agree or Strongly agree that they can stay on track with their recovery goals (Craving Skills Check, statement 6) | Panel: joining, 3 and 12 months | Set after two quarters |
| Craving skills | Share who improve on the Craving Skills Check | Panel: joining, 3 and 12 months | 60% |
| 90-day retention | Share of new accounts active in days 61 to 90 | Totals job, monthly | 30% |
| Safety | Crisis resources reachable in two taps or fewer from every screen | Before launch and each release | 100% |
| Outreach | Recovery-center outreach visits, partner-led | Outreach records | 4 |

- The core outcome needs the craving log to record whether each craving was managed, not only a running count. Joe confirms the design.
- Craving intensity, in the logic models, is measured only if the log records it. The October design doesn't.
- We don't report days-in-recovery counters. A reset is personal, and the counter isn't built as a measure.

### Changes from the October logic models

All six reflect decisions already made, and the October 29 updates to the Program Logic Models (version 2), Business Plan Summary (version 3), and Privacy Policy draft v6 now match this plan.

1. Town halls are quarterly (4 in 2027), and "4 user ideas adopted" becomes at least three community-driven changes per app.
2. Reach targets cover each app's first 12 months after launch, matching the October 26 business plan summary.
3. Care About You has no AI in 2027, so "kindness ideas generated" is dropped.
4. Beat the Craving has no reminders, streaks, or daily check-ins, so those outputs are dropped.
5. **Decided:** AFC wrote its own checks for every app, and every panel member answers the AFC Well-Being Check. The checks replace WHO-5, the published app scales, and the Flourishing Scale, so every question can be shown publicly.
6. **Decided:** no surveys inside the apps. Survey measures come from the opt-in AFC Impact Panel, by email, for adults only.

## Community and co-design measures

"Community-Powered" is measured by who shows up, whether every idea gets an answer, and how many changes come from users, using the Town Hall Playbook's 2027 targets.

| Measure | How it's counted | 2027 target |
|---|---|---|
| Town halls held | Quarterly first looks on Jan 19, Apr 20, Jul 20, and Oct 19 | 4 |
| Attendance | Head count at the 10-minute mark | 10 or more each |
| Returning attendees | First names compared with the last attendance count | Grows each quarter |
| Town hall experience | Survey average for "worth my time" (1 to 5) | 4.0 or higher |
| First-look interest | Anonymous poll: share who say the app would be useful | Track |
| Private testers | Sign-ups per first look; testers still active after 14 days | 15 sign-ups and 12 active per app |
| Changes from feedback | Changes made before launch that came from town halls or testers | 3 or more per app |
| Ideas answered | Ideas logged within 2 days and answered within 2 weeks | 100% |
| Focus groups | Partner focus groups, one per app | 4 |
| Accessibility reviews | One review with disabled testers before each launch | 4, with every critical issue fixed |
| Accommodations | Requests met, or answered honestly with an alternative | 100% |

| Measure | How it's counted | 2027 target |
|---|---|---|
| Partners | Formal partner agreements | 2 (one recovery, one disability advocacy) |
| On-time launches | Public launch in each app's target month | 4 of 4 |
| Social-feature evidence | Poll and discussion results on an optional way to connect | Logged for the Board's gated decision |

Sam logs these within 2 days of each town hall and private test, so they feed the Board summary that Section 6.8 requires.

**Decided:** town hall and workshop sign-up forms add the same optional county question, so community foundation reports can count every participant, not just panel members.

## How we collect data

Usage numbers are counted automatically, and the apps never ask survey questions; everything that needs people's own answers comes from the AFC Impact Panel, by email.

### Sources

| Source | What it gives | Who pulls it |
|---|---|---|
| App Store Connect and Google Play Console | Downloads, ratings, crash rates, and downloads by partner link | Sam, monthly |
| Monthly totals job (app database) | Active users, feature counts, and retention | Runs automatically; Sam reads the totals |
| AFC Impact Panel (email surveys) | AFC's own checks and questions, and county of residence | Sam, as each survey comes in |
| Town hall and testing records | Sign-ups with optional county, attendance, polls, surveys, and testers (Google Forms, Meet, TestFlight, Play closed tests) | Sam, within 2 days of each event |
| Ideas log (Google Sheet) | Ideas, scores, Board decisions, and replies | Sam |
| Focus group notes | Themes from people with lived experience, using the Focus Group Toolkit | Sam, with the partner |
| Accessibility review log | Issues found and fixed, by app and release | Sam and Joe, with disabled testers |
| Partner and workshop records | Agreements, workshops, attendance, county of residence, and post-workshop ratings | Sam |

Each partner gets its own App Store campaign link and Google Play link, so downloads by partner show up as totals without any tracking inside the app. Apple's campaign counts include only people who share data with developers, so treat partner numbers as a floor.

### Organization calendar

| When | What | Who | Time (estimate) |
|---|---|---|---|
| First week of each month | Copy app store numbers and the totals job into the impact dashboard (a Google Sheet); send due panel snapshots | Sam | About 2 hours |
| Within 2 days of each town hall | Log town hall, testing, and idea measures | Sam | Part of town hall time |
| Each go or no-go, 8 weeks before a first look | Check this plan's measures against what will ship | Sam, Joe | 30 minutes |
| Before each public launch | Accessibility review; test the totals job; check store privacy labels | Sam, Joe | About 3 hours |
| Each quarter, before the Board meeting | Learning review and one-page brief | Sam | About 3 hours |
| After each app's first two quarters live | Set targets for that app's new measures | Board | Board meeting |
| Early each year, from 2028 | Annual impact report | Sam | About 10 hours |
| Each October | Review and update this plan | Sam, Board | 1 hour |

## The AFC Impact Panel

Every measure that needs people's own answers comes from the AFC Impact Panel: adults who use an AFC app join by email, answer a 3-minute survey when they join and again at 3 and 12 months, and get something back each time.

Usage outcomes, such as milestones reached and cravings managed, still come from app data for everyone. The panel covers only what the apps can't count, such as well-being, loneliness, and confidence.

### How people join

- **Settings link:** each app's Settings has a "Join our Impact Panel" link to the sign-up page at appsforchange.org/panel.
- **Welcome email:** each app's welcome email carries the same invitation, so most people join near their start, when a first answer works as a true baseline.
- **Everywhere else we talk to people:** the website, the quarterly newsletter, town halls, private test groups, and partners.
- **One short form:** first name, email address, county of residence, and whether they'd like to be named or anonymous, plus a box confirming they're 18 or older and want to join. No last name. Each sign-up goes to info@appsforchange.org, and AFC follows up by email.

### What members get

- **Their own well-being snapshot:** after each survey, an email with their AFC Well-Being Check score out of 25 and how it has changed since they joined. It's theirs to keep, and it isn't a diagnosis.

- **First access:** first invitations to each new app's private test.
- **Results first:** a members-only summary before the public impact report.
- **Recognition, if they want it:** the annual impact report lists named members by first name and county and counts anonymous members by county only. Nobody is ever listed on the website or with the app they use.

Every benefit is free, and every member gets them, whatever they answer or skip.

## Survey schedule

| When | Every member | For each app they use (up to two) | Time |
|---|---|---|---|
| Joining | Which apps they use and for how long; AFC Well-Being Check | The app's check | About 3 minutes |
| 3 months | AFC Well-Being Check, helpfulness, ease of use | The app's check, its own questions, and "since you started" | About 3 minutes |
| 12 months | AFC Well-Being Check, helpfulness | The app's check, its own questions, and "since you started" | About 3 minutes |

The appendix lists every question.

## How the emails work

- Surveys come from info@appsforchange.org with a general subject line, such as "Your Apps for Change survey," so nothing sensitive shows on a lock screen.
- One reminder goes out a week later, then nothing until the next survey.
- Every email has a one-click way to leave the panel.
- A short Google Apps Script assigns panel codes and sends each survey on schedule. Until it's built, Sam sends them by hand each month.

## How answers are kept

- Answers are stored under a panel code in Google Sheets, apart from names and emails, and only Sam can open either.
- Answers are confidential, not anonymous, even for members who choose not to be named: Sam needs the code to send each person's snapshot.
- Panel answers are never linked to app accounts or entries.
- Reports show only totals, and groups under 10 stay hidden, including results for a single county.

## Panel targets (proposed)

| Measure | Target |
|---|---|
| Members who join, per app | 25 in the app's first year |
| Members who join within their first 2 weeks of using the app | Track |
| Members answering at 12 months, per app | 10 or more |

| Measure | Target |
|---|---|
| Share finishing each survey | Track |
| Members living in the East Metro (Dakota, Ramsey, and Washington counties) | Track; 50% or more within any East Metro pilot, the test SPMF and F. R. Bigelow apply |

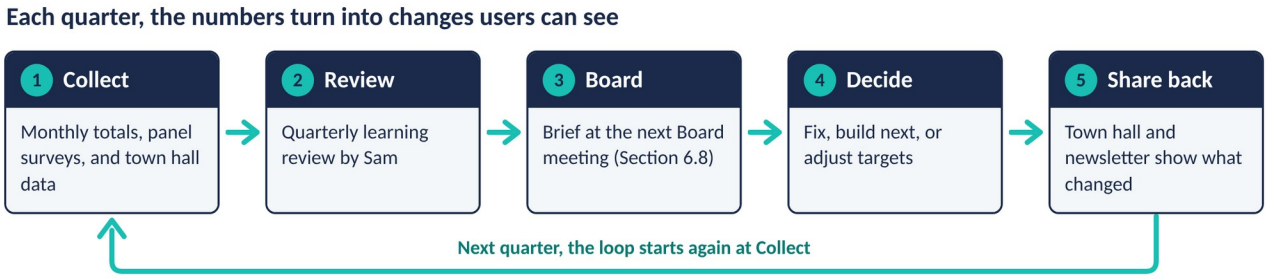

## Privacy and data safeguards

Measurement stays inside the published Privacy Policy: optional answers, automatic totals, nothing shared below the level of totals, and no new data use without telling users first.

- **Consent.** The panel sign-up form explains what we ask, how often, what members get, and how answers are kept, and asks people to confirm they're 18 or older. Counsel reviews the wording, since well-being, loneliness, and craving answers are health-related (privacy policy review item 7).
- **Leaving.** Members can skip any question or leave anytime with the link in every email, and leaving never changes how any app works.
- **Storage and deletion.** Panel answers sit in AFC's Google Workspace under a panel code, apart from names and emails, and are never linked to app accounts. Members can ask us to delete theirs at any time, and we do it within 30 days. Totals already counted stay, because they can't identify anyone.
- **Access.** Only the people who run the apps can reach the app database, and only Sam can open panel records. Everyone else, including the Board, sees totals.
- **No user-level sharing.** No funder, partner, or evaluator gets individual answers, even de-identified, unless the privacy policy allows it and the member has said yes (Privacy Policy, Section 4). If the 2029 study needs it, we'll ask members by email first.
- **No screening.** We don't screen scores or contact people about them. Every survey and snapshot ends with the same support note: 988 and 911, plus SAMHSA's National Helpline for Beat the Craving members.
- **AFC-owned measures.** Every check is AFC's own wording, so no permissions are needed, and every question can be shown publicly. Changes follow the version rules in AFC Impact Measures.
- **Policy and store disclosures.** Privacy Policy draft v6 (October 29) replaces "Short surveys in every app" with a section on the panel and AFC's own checks, and counsel reviews it before the panel opens. Keep the App Store and Google Play privacy forms matched to what the apps collect (review item 16).
- **Ethics review.** The 2029 independent evaluation will likely need review by an ethics board (IRB), so its timeline includes that step.
- **Records.** Keep the impact dashboard, quarterly briefs, and reports with Board records under the Document Retention Policy.

# Learning and reporting

Every quarter, the numbers become one Board brief, one "you said, we did" update for the community, and a short list of fixes.

The loop follows the town hall calendar, so each quarter's Board brief travels with the town hall summary that Section 6.8 requires.

## Who gets what

| Audience | What they get | When |
|---|---|---|
| Board | One-page learning brief and the impact dashboard | Each quarterly Board meeting |
| Community | "You said, we did" and headline totals | Each town hall and quarterly newsletter |
| Funders | Each program's measures, in the funder's format | As each grant requires |
| Community foundations | Members by county, plus results for their service area once 10 or more people there have answered, such as the East Metro (Dakota, Ramsey, and Washington counties) for SPMF and F. R. Bigelow, or the St. Croix Valley for Hugh J. Andersen | With each application and grant report |
| Partners | Totals for the program they support | Yearly, or on request |
| Everyone | Annual impact report, listing named panel members by first name and county | Early each year, starting in 2028 |

## How we read the numbers

- Every percentage shows how many people it's based on, and panel results describe panel members, not every user.
- Before-and-after results compare the same people's own answers, never different groups.
- On every AFC check, "improved" means the total rose 3 points or more (4 for the seven-statement Connection and Kindness Check), "held steady" means it moved less than that either way, and "declined" means it fell by that much or more.
- AFC's checks have no published norms, so the Board reviews these cutoffs after the first year of results and then keeps them steady.
- Each app is compared with its own targets and its own past, not with the other apps.

### Decision rules

- **A core outcome misses its target two quarters in a row:** ask testers or a focus group why, and ship one fix.
- **Monthly active users fall three months in a row:** check app quality and reach before adding features.
- **A critical accessibility issue turns up:** fix it in the next release.
- **Fewer than 10 people answered:** combine quarters before drawing conclusions.

## Roles, time, and budget

The plan runs on about 4 hours a month of the Executive Director's time and a small one-time build by the Lead Developer, with no new tool costs in 2027.

| Who | Responsibilities | Time (estimate) |
|---|---|---|
| Executive Director (Sam) | Owns the plan; runs the Impact Panel; monthly pull; quarterly review and Board brief; town hall and testing measures; annual report | About 4 hours a month, plus about 10 hours for the annual report |
| Lead Developer (Joe) | Builds the monthly totals job, the meeting-notes rating, the panel links, partner links, and the panel email script; keeps them working | About 12 to 16 hours, before the April launch; about 1 hour per release after that |
| Board | Reviews quarterly briefs; sets targets after two quarters of data; approves the impact report; weighs social-feature evidence | Part of regular meetings |
| Partners and lived-experience advisors | Focus groups, accessibility reviews, and the 2028 results review | Stipends when funded |
| Independent evaluator | The 2029 study | Scoped and funded separately |

| Cost item | 2027 cost | Note |
|---|---|---|
| Monthly totals job and panel email script | $0 | Volunteer build; no analytics or survey vendor |
| App store reports | $0 | Included with the Apple and Google developer accounts |
| Google Forms, Sheets, Gmail, and Meet | $0 | Google Workspace for Nonprofits |
| Panel benefits | $0 | Snapshots, first access, results first, and recognition; no cash or gift cards |
| Focus groups | Within the existing $600 line | 2027 budget; $200 in the floor plan |
| Paid accessibility testers | Not yet funded | On the "Partner with us" list |
| Independent evaluation | $0 in 2027 | Funding sought for 2029 |

Moving surveys out of the apps also frees Joe's time: the build shrinks to a totals job, the meeting-notes rating, the panel links, partner links, and a short script for panel emails.

## Evaluation roadmap, 2027 to 2029

The evaluation grows in three phases; the outside study in 2029 waits for 12-month results and dedicated funding, and sees individual answers only with users' permission.

**Independent evaluation waits for 12-month results, permission, and funding**

Phase 1 runs app by app as each one launches, so the two most mature programs in 2029 will likely be Advocate's Compass and Goal Getter. Before any evaluator sees individual answers, the privacy policy must change and users must agree (Privacy Policy, Section 4). Without that, the study works from totals only.

## Limits and how we manage them

The biggest limit is size: the panel aims for 25 members per app, so survey results rest on small groups.

| Limit | Why it matters | How we manage it |
|---|---|---|
| Small numbers | 12-month answers can fall under 10 people, and percentages swing widely | Show "fewer than 10" when needed; combine quarters; judge targets over 12 months |
| Who joins | Panel members may be more engaged, or doing better, than other users | Report results as "panel members"; compare the panel's size with each app's users |
| Late joiners | People who join weeks after starting an app don't give a true baseline | Invite people in the welcome email; ask how long they've used the app; ask a "since you started" question |
| Drop-off | Members drift away before the 12-month survey | One reminder per survey and a year-in-review snapshot at 12 months; email still reaches people who stopped using the app |
| Self-report | Answers show how people feel, not verified results, and AFC's checks are new, with no published track record | Test each check's wording with users; check that its statements hang together once 50 members answer; label results as self-reported AFC measures |
| No comparison group | Change may come from other help or from time passing | Say "contributed to," not "caused"; the 2029 study adds a stronger design |
| Capacity | The panel takes some of Sam's time every month | Script the emails and keep each survey to about 3 minutes |
| Design drift | Features change before launch and can break a measure | Recheck the measures at each go or no-go, 8 weeks before a first look |

# Appendix: panel forms and build notes

Every question below is AFC's own and can be shown anywhere. Each check appears in full in *AFC Impact Measures*, along with its scoring and how it was built.

## Panel sign-up and consent (draft for counsel review)

> **Join the AFC Impact Panel.** Help us learn whether our free apps really help. Three times over a year, we'll email you a short survey of about 3 minutes. After each one, you'll get your own well-being snapshot. You'll also get first invitations to try new apps and see our results before anyone else.
>
> You choose how you're recognized. Our annual impact report lists named members by first name and county, and counts anonymous members by county only. We never list anyone on our website or with the app they use.
>
> Your answers are confidential either way. We keep them under a panel code, apart from your name and email, and report only totals. We never link them to your app account or what you enter in the apps, and we never share them with funders or partners. You can skip any question or leave anytime.
>
> ☐ I'm 18 or older, and I want to join.

The form asks only for a first name, an email address, county of residence (Minnesota's 87 counties; Pierce, Polk, and St. Croix counties in Wisconsin, for the St. Croix Valley; or "Somewhere else"), and named or anonymous. It never asks for a last name, and each sign-up goes to info@appsforchange.org. The first survey asks which apps the person uses and for how long.

## Questions for every member

| Question | Answers | When |
|---|---|---|
| Which AFC apps do you use, and for how long? | For each app: Less than 2 weeks, 2 weeks to 3 months, More than 3 months | Joining |
| AFC Well-Being Check (5 statements) | Strongly disagree to Strongly agree | Joining, 3 and 12 months |
| How helpful has [app] been for you so far? | 1 Not at all to 5 Very helpful | 3 and 12 months |
| Could you do everything you wanted to in [app]? | Yes, Mostly, No | 3 months |
| Since you started using [app], how has [area] changed? | Much worse, Worse, About the same, Better, Much better | 3 and 12 months |
| Anything else you'd like us to know? | Optional comment | Every survey |

The [area] is "speaking up for yourself" for Advocate's Compass, "progress on goals that matter to you" for Goal Getter, "feeling connected to people in your life" for Care About You, and "handling cravings" for Beat the Craving.

## Questions for each app

| App | Question | Answers | When |
|---|---|---|---|
| Advocate's Compass | Speaking Up Check (6 statements) | Strongly disagree to Strongly agree | Joining, 3 and 12 months |
| Goal Getter | Goal Progress Check (6 statements) | Strongly disagree to Strongly agree | Joining, 3 and 12 months |
| Goal Getter | In the past year, did you reach a goal that matters to you? | Yes, Partly, Not yet | 12 months |
| Care About You | Connection and Kindness Check (7 statements) | Strongly disagree to Strongly agree | Joining, 3 and 12 months |
| Beat the Craving | Craving Skills Check (6 statements) | Strongly disagree to Strongly agree | Joining, 3 and 12 months |

Every survey and snapshot ends: "Thank you. If you're struggling, call or text 988. In an emergency, call 911." Beat the Craving members also see SAMHSA's National Helpline, 1-800-662-4357.

## Well-being snapshot (template)

> **Your well-being snapshot.** Your well-being score today is [score] out of 25. When you joined, it was [score], so it's [up or down] [number] points.
>
> This score comes from the AFC Well-Being Check, five short statements we wrote to see how members are doing. Your score is just for you, and it isn't a diagnosis.
>
> Thank you. If you're struggling, call or text 988. In an emergency, call 911.

## Build notes for Joe

1. Add a last-opened date to each account. It's the only new usage data the plan needs.
2. Run a monthly totals job on the server that writes only totals by app and month: active users, retention, and the counts in each program table.
3. Count from records the apps already keep (goals, milestones, plans, cravings, meetings, meeting ratings, follow-ups, lessons, Advocate Now requests), never from what people typed.
4. Confirm that Beat the Craving's log records whether each craving was managed, and agree on what counts as a saved coping plan (proposal: three or more strategies).
5. In Advocate's Compass, add an optional "How did it go?" section to each meeting's notes: "How prepared did you feel?" (1 Not at all to 5 Very prepared) and "Did you raise what mattered most to you?" (Yes, Partly, No). No prompt, reminder, or notification points to it.
6. Add a "Join our Impact Panel" link to each app's Settings and one invitation to each welcome email, both opening appsforchange.org/panel. Keep email subject lines general.
7. Build the sign-up page with an embedded Google Form, so responses land in the panel sheet and info@appsforchange.org gets a notice of each one.

8. Write a short Google Apps Script that assigns panel codes, emails each survey on schedule from info@appsforchange.org with the code filled in, sends one reminder, and logs who finished.
9. Create an App Store campaign link and a Google Play link with UTM tags for each partner.
10. Keep third-party analytics and advertising SDKs out of every app.
11. Before each launch, test the totals job and keep the App Store privacy labels and Google Play Data safety form matched to what the app collects.
